

# HUNTER 1" ROTORS

Trusted by professionals.  
Proven on the world's finest fields.

## Part- to Full-Circle Coverage

Reduce inventory and maximize flexibility with 50° part-circle to non-reversing 360° adjustment

## High-Torque Drive

Power through dirty water with a reengineered drive system built for demanding conditions

## Universal Body

Simplify field upgrades with a common body design shared across I-25 and I-40 Rotors

## High-Performance Nozzles

Improve watering accuracy and efficiency with triple-port nozzles

I-25

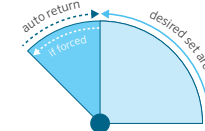

I-40 ON

## Automatic Arc Return and Vandal-Proof Drive

Keep arcs locked in and coverage consistent with a patented, tamper-resistant return mechanism

## Chemical-Tolerant Filter Screen

Keep water flowing reliably with a durable, high-quality filter screen

## Factory-Installed Check Valve

Prevent runoff and water waste with industry-leading 15' check height (I-40)

# Hunter®

## IN THE FIELD

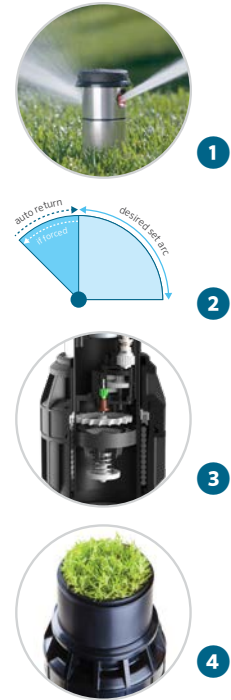

- 1 Issue:** Uneven coverage is leaving dry spots in the middle of the field.

**Solution:** The I-40 is the only 1" rotor with dual-opposing nozzles for maximum uniformity across large turf areas.
- 2 Issue:** Rotor tampering knocks arcs out of alignment and leads to uneven coverage.

**Solution:** The I-25 and I-40 feature automatic arc return that resets the rotor to its intended arc, helping maintain proper coverage without return trips.
- 3 Issue:** My rotors fail fast in harsh, rocky, or sandy soil.

**Solution:** The I-40's stainless steel riser and sleeve deliver durability and leak protection, while a high-torque drive powers through debris to reduce site visits.
- 4 Issue:** Some sprinklers don't fully retract after watering, creating a tripping hazard.

**Solution:** Safety matters in any active outdoor space. Hunter rotors help maintain a safer surface with an extra-thick rubber cover or turf cup kit and a heavy-duty spring for reliable retraction.

## IN THE DESIGN OFFICE

- Both I-25 and I-40 Rotors are available in 4" and 6" pop-up models, offering maximum design flexibility across applications.
- Exclusive high-speed and opposing nozzle options support the highest playability standards, moisture control, and uniformity on premium sports fields.
- A standard check valve and robust riser retraction spring prevent puddling — up to 10' in the I-25 and 15' in the I-40.
- Color-coded rubber covers simplify product identification and ensure the right model is used during installation and maintenance.

## PRODUCT COMPARISON

FEATURES	I-25	I-40	Competitor (I-25 Equal)	Competitor (I-40 Equal)
Adjustable 50° to 360° Non-Reversing Head	●	●		
Automatic Arc Return	●	●	●	●
Simple Arc Alignment	●	●	●	
User Customization (4" and 6" Models)	●	●
